PROFESSIONAL SUMMARY

Red Team and Offensive Security professional with hands-on experience in VAPT, reconnaissance, penetration testing, vulnerability assessment, exploitation, and security automation. Skilled in Python, C, JavaScript, and SQL, with practical experience using Kali Linux, Burp Suite, Nmap, Nuclei, Metasploit, and Wazuh. Strong understanding of OWASP Top 10, MITRE ATT&CK, web and network security, privilege escalation, post-exploitation, and adversary simulation. Experienced in identifying attack paths and security weaknesses to help organizations strengthen their defensive security posture.

TECHNICAL SKILLS

Red Teaming | Offensive Security | Penetration Testing | VAPT | Vulnerability Assessment | Reconnaissance | Exploitation | Web Application Security | Network Security | Security Automation | Threat Intelligence | Security Monitoring | Incident Response | MITRE ATT&CK | OWASP Top 10 | Cyber Kill Chain | Kali Linux | Burp Suite | Nmap | Nuclei | Metasploit | Nessus | Subfinder | DNSX | HTTPX | Naabu | Katana | Wireshark | Wazuh | OpenEDR | Python | C | JavaScript | SQL | HTML | CSS | ASP.NET | Django | React.js | REST APIs | SQL Server | PostgreSQL | Linux | Windows | Git | GitHub | API Development | CRUD Operations | SQL Queries | Stored Procedures | Debugging | Testing | Deployment

CYBERSECURITY EXPERIENCE

CyArt

Jan 2026 – Aug 2026

Cyber Security Analyst Intern

- Contributed to XFinder, an automated EASM/ASM platform for reconnaissance, attack surface discovery, asset enumeration, vulnerability assessment, and exposure monitoring.
- Performed reconnaissance, enumeration, vulnerability assessment, and penetration testing using Kali Linux, Nmap, Subfinder, DNSX, HTTPX, Naabu, Nuclei, Katana, and Metasploit.
- Conducted web and network security assessments, mapped findings to MITRE ATT&CK, and developed Python-based security automation to support offensive security and threat analysis

DCDIUM Technologies

Jun 2024 – Aug 2024

Cybersecurity Intern

- Conducted VAPT, penetration testing, vulnerability assessments, firewall rule reviews, and access-control assessments to identify security weaknesses and potential attack paths.
- Performed endpoint and security monitoring using OpenEDR and Wazuh, including threat detection, log analysis, IOC investigation, and security event analysis.
- Supported vulnerability management and network security assessments, identifying misconfigurations and security gaps to strengthen the organization's defensive posture.

Twinkle IT Solution Pvt Ltd

Jun 2025 – Aug 2025

Software Developer Intern

- Developed secure web applications using ASP.NET, C#, SQL Server, HTML, CSS, and JavaScript, with focus on application security and secure coding practices.
- Developed and optimized SQL queries, stored procedures, and CRUD operations, while identifying potential security issues such as input validation and access-control weaknesses.
- Performed application testing, debugging, security testing, and deployment, supporting vulnerability identification and remediation throughout the development lifecycle.

Nexgensis Technologies Pvt Ltd

Jun 2023 – Aug 2023

Software Developer Intern

- Developed web applications using Python, Django, React.js, and SharePoint, with a focus on scalable and secure application development.
- Implemented data processing, automation, and visualization features to improve application functionality and workflow efficiency.
- Performed application testing, debugging, deployment, and Agile development activities, ensuring reliable and maintainable software delivery.

EDUCATION

Symbiosis Skills and Professional University
B.Tech - CSIT (Cyber Security)

Aug 2022 – Aug 2026
CGPA: 8.6

PROJECTS

Attack Surface Management (ASM)

- Developed an automated Attack Surface Management (ASM) platform using Subfinder, DNSX, Naabu, and HTTPX for reconnaissance, asset discovery, service enumeration, and exposure monitoring.
- Automated subdomain enumeration, DNS intelligence, port scanning, service discovery, and exposed asset identification to streamline reconnaissance workflows.
- Built centralized asset inventory and monitoring workflows using PostgreSQL and React for tracking and managing discovered attack surface data

Red & Blue Teaming Simulation Platform

- Developed a cybersecurity simulation platform using React.js to support Red Team and Blue Team exercises, adversary simulation, and security operations training
- Built dashboards for attack visualization, threat monitoring, security event analysis, and incident tracking to simulate real-world security operations.
- Implemented role-based access, authentication interfaces, and security event visualization to support realistic Red Team and Blue Team workflows.

Portable Log Analysis Tool

- Built a portable offline log analysis tool for air-gapped environments to identify suspicious activity without internet or cloud dependencies.
- Implemented rule-based detection and anomaly-driven log analysis workflows for identifying suspicious events, indicators, and potential security threats.
- Designed security analysis workflows focused on data integrity, privacy, threat detection, and reliable security monitoring in isolated environments.

AI-Powered Real-Time Laptop Security

- Built a Streamlit-based cybersecurity dashboard for system monitoring, network analysis, security event monitoring, and threat detection.
- Implemented real-time process and network monitoring using Python, psutil, and PyShark to identify suspicious system and network activity.
- Integrated AI-assisted anomaly detection and Plotly-based security visualizations for analyzing security events and identifying potential threats.

Project Management System

- Developed a web-based project management system using ASP.NET Web Forms, C#, and SQL Server.
- Implemented role-based authentication, authorization, and access controls to secure application functionality and user data.
- Developed modules for project planning, task assignment, milestone tracking, and database management.

Chronic Disease Management (AI/ML)

- Developed an AI/ML-based health monitoring system using machine learning and predictive analytics for disease risk assessment
- Applied machine learning models and data analysis techniques to identify patterns and predict potential health risks.
- Implemented data processing and prediction workflows to support automated risk analysis and health monitoring.
